EDUCATION

Seneca Polytechnic   Toronto, ON
Computer Programming and Analysis - Advanced Diploma (GPA: 3.6)   *Graduation date: December 2025*

- **Relevant Coursework:** Software Analysis and Design, Advanced Database Services, Data Structures and Algorithms
- **Activities:** Seneca Science and Technology Guild, AI Seneca Club

SKILLS

Web: JavaScript, Python, HTML, CSS, React, Node.js, MongoDB, Foundation, SQL, Pug
Mobile: Swift, SwiftUI, Xcode, Alamofire, Core Data
Tools and Technologies: Git, Docker, MySQL, Jira, Figma, Prototyping, UI/UX

WORK EXPERIENCE

Mobile Engineer Intern   April 2023 – July 2023
International Restoration Church

- Created interactive map functionality using the **MapKit** framework, which increased user engagement with location-based features
- Refactored existing code to enhance efficiency and minimize bugs, leading to a noticeable reduction in app crashes and improvement in specific performance metrics, such as a **22%** decrease in app load time
- Implemented the MVVM design pattern to restructure a legacy codebase, significantly reducing the onboarding time for new developers and fostering faster integration into project workflows

Software Engineer Intern   April 2021 – August 2021
GoFriends

- Improved website performance by optimizing code and reducing page load times by over **20%**
- Optimized website for **100%** cross-browser compatibility by using responsive design principles, significantly reducing user-facing issues and enhancing the overall user experience
- Implemented mobile responsiveness and optimized the website for mobile devices using the **Foundation framework**

PROJECTS

ImagiTalk | *React, Next.js, Flask, Python, Cohere API, Docker*   **Project Page**
- **ImagiTalk** is an AI-based messenger app enabling users to engage in nostalgic conversations with childhood characters through character emulation and expressive voice synthesis
- Led Front-End development using **React**, Next.js, Tailwind, and Bootstrap, creating a user-friendly interface
- Trained ML model on character voices, integrating ElevenLabs for expressive voice synthesis, enhancing the conversational experience

Netflix Clone | *React, Tailwind CSS, Next.js, MongoDB, Prisma, NextAuth*   **Project Page**
- Developed responsive **full-stack Netflix clone** using React, Next.js, Tailwind CSS, Prisma, MongoDB, and NextAuth
- Implemented database functionality using Prisma ORM and MongoDB to manage user accounts, movie data, and personalized lists of favorite movies within the Netflix clone
- Integrated Google Auth and Github Auth alongside NextAuth for seamless authentication
- Designed a responsive UI with Tailwind CSS for seamless user experience across devices

S&P500 Stock Predictor | *Python, scikit-learn, Pandas, Jupyter Notebook*   **Project Page**
- Utilized **machine learning** to forecast S&P500 stock movements, leveraging historical data from Yahoo Finance API
- Implemented a Random Forest Classifier model to predict price changes, utilizing features such as closing price, volume, etc.

Sorting Algorithm Visualizer | *Python, Pygame*   **Project Page**
- Created a dynamic visualization of sorting algorithms using the **Pygame** library
- Implemented Insertion Sort and Bubble Sort algorithms, allowing users to interactively sort a random list of numbers in ascending or descending order
